PRINTED COATED TEXTILE BASED ON A POLYOLEFIN COMPONENT

ABSTRACT

The invention relates to a coated textile having printed patterns, of the type comprising a textile underlayer forming a backing and combined with a coating layer formed from a film based on an olefin polymer or copolymer or a blend of olefin polymers or copolymers and on an elastomer, the said coating layer having printed patterns on its surface which is not bonded to the textile underlayer.

It also relates to a process for producing it.

It applies more particularly to the manufacture of printed coated tablecloths.
